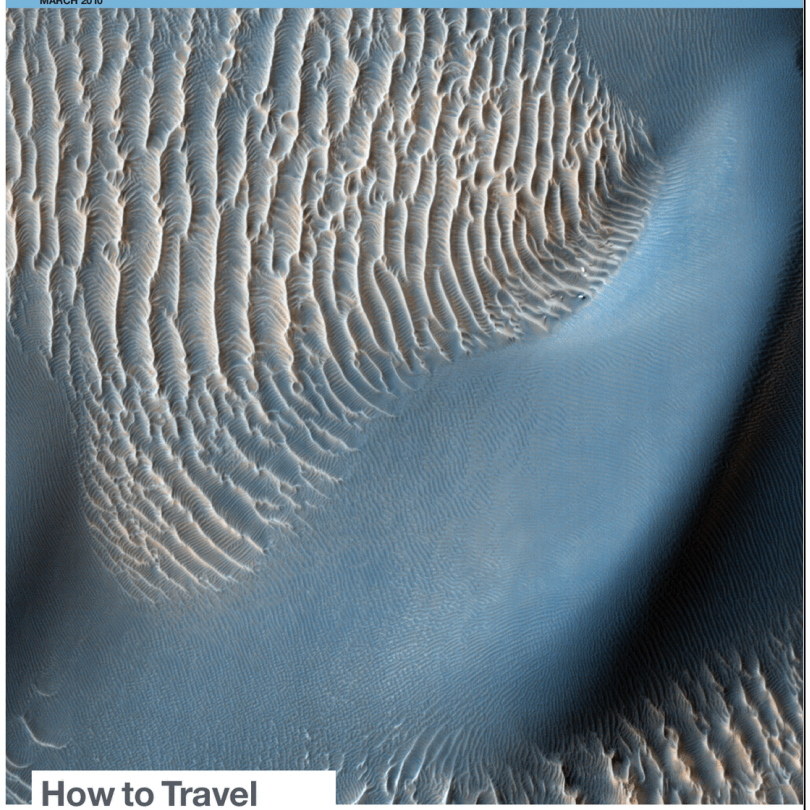
MARCH 2010



How to Travel Through Time 40

Do inescapable paradoxes make time travel impossible? Not at all, says this theoretical physicist.

BY SEAN CARROLL

The Picasso of DNA 32

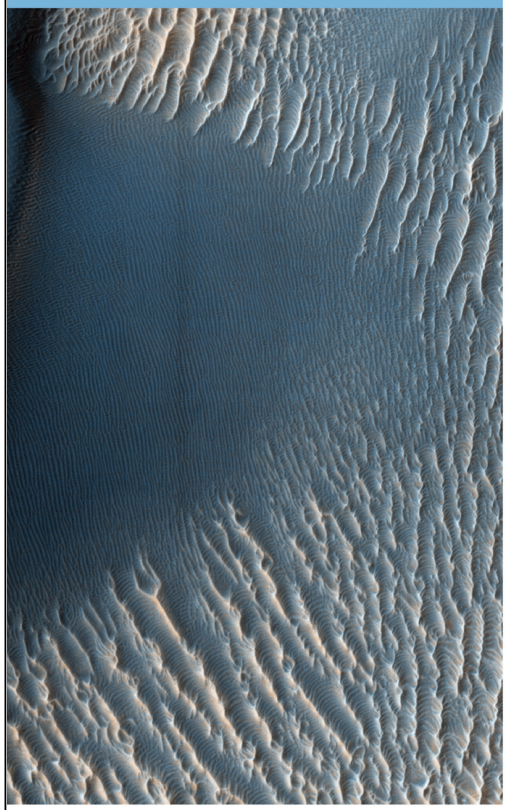
Geneticist George Church is learning how to reassemble our genes the way a great artist rearranges paint. Medicine—and *Homo sapiens*—may never be the same.

By Ed Regis

Who Are You Calling Bird Brain? 44

The amazing mental capacities of ravens, jays, and crows are forcing scientists to reevaluate their ideas about the evoution of intelligence.

By Charles Wohlforth



Proctor Crater on Mars, imaged by NASA's Mars Reconnaissance Orbiter.

Editor's Note 6

Data 8
A hands-on approach to brain research, the secrets of fish oil, a practical makeover for geothermal energy, robotic insects, slicing the universe, and more.

Five Questions for Erez Lieberman-Aiden 20
His three-dimensional model of the human genome could help solve one of biology's central mysteries. By Amy Barth

Destination Science 22
At the New Mexico site of the world's first nuclear explosion, everything seems normal—until you look more closely.
By LeeAundra Keany

Hot Science 26
The best new books, TV, film, and exhibits.

The Brain 28
The mind's eye is more than a metaphor: It really is possible to see without looking.
By Carl Zimmer

Vital Signs 30
Was something wrong with this rambunctious 3-year-old, or was he just acting his age?
By Mark Cohen

20 Things You Didn't Know About Light 80
By LeeAundra Keany

DISCOVER on the Web: Videos, breaking news, and more—the latest is online at **discovermagazine.com**.

On the Cover: High-definition video still by Biwa Studio.

Ice Fishing for Neutrinos 50

On the frozen surface of Siberia's vast Lake Baikal, physicists set a cunning trap for ghost particles from the edge of the cosmos.

By Anil Ananthaswamy

Where the Wild Things Are 58

A Dutch ecologist is re-creating the landscape of prehuman Europe, challenging the sacred rules of conservation in the process.

By Andrew Curry

DISCOVER Interview: Barry Marshall 66

He discovered the cause of ulcers and stomach cancer. But it was so hard to convince the medical establishment that he had to run the test on himself.

By Pamela Weintraub
